This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:: SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ·.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Submitted (19-UNN-2002) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CE10 15A, UK. E-mail enquiries:
hunquery@sanger.ac.uk clone requests: clonerequest@sanger.ac.uk
on Un 15, 2001 this sequence version replaced gi:14330010.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequencing vector: Plasmid;

PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PAX867-PPARgammael polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. PPARgammal molecules are also useful for providing nucleotide and amino acid sequence useful for detecting the above disease. The present sequence represents the nucleotide sequence including and surrounding the fusion juncture in the PAX8e9-PPARgammael DNA.
       PAX8-PPARgammal polypeptides can be expressed by standard recombinant
                  methodology. A PPARqamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New PAX8-PPARc1 oncogene and oncoprotein, useful for detecting and treating certain tumors or cancers, e.g. follicular carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PAX8-PPARgammal; oncogene; cytostatic; PAX8; PPARgammal; cancer; follicular carcinoma; PAX8e9-PPARgammael; human; ss.

                                                                                                                                                          contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology, A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents the nucleotide sequence including and surrounding the translocation fusion juncture in the PAX8-TPPARgammael
                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                            The invention relates to an oncogene designated PAX8-PPARgammal that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an oncogene designated PAX8-PPARgammal that
                                                    New PAX8-PPARcl oncogene and oncoprotein, useful for detecting and treating certain tumors or cancers, e.g. follicular carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New PAX8-PPARc1 oncogene and oncoprotein, useful for detecting and treating certain tumors or cancers, e.g. follicular carcinoma

Subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer e.g. follicular carcinoma the PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PAX889-PPARgammael polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an oncogene designated PAXB-PPARgammal that contains a PAXB coding region fused to PPARgammal coding region. The PAXB-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAXB-PPARgammal where the disorder is cancer, e.g. follicular carcinoma. The PAXB-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PAXBe9 (-exon 8)-PPARgammal.

The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatocropic, and everyostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic
                                                                                                            The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgammal ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PPARgamma polypeptide encoding cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gene, liver carcer, ds, hepatocellular carcinoma, hepatotropic, metastatic liver tumour, cytostatic; expression profile, disease state, disease progression, drug toxicity, drug efficacy, drug metabolism.
                                  New PAX8-PPARc1 oncogene and oncoprotein, useful for detecting and treating certain tumors or cancers, e.g. follicular carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumor in a patient, involves detecting the level of expression of two or more genes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0
                                                                                                                                                                                                                                                                                                                                                                                            agonists and antagonists comprises measuring fluorescent resonance energy transfer between fluorescent-labelled nuclear receptors and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                           co-activators. The method can be used for identifying agonists and antagonist of nuclear receptors.
                                                                                                                                                                                                                                                                                                                                                            receptor-gammal (PPAR-gammal).
The invention relates to a method for identifying nuclear receptor
                                                                                                                                                                                                                                                                                                                                            the human peroxisome proliferator activated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PAX8-PPARgammal; oncogene; cytostatic; PAX8; PPARgammal; cancer; follicular carcinoma; PPARgamma; human; ss.

PPPR are orphan receptors, and may play a role in proliferative and differentiation aspects of cancer. The PPAR-gamma polynucleotide is useful for detecting a mRNA transcript that encodes PPAR polypeptide. It is also useful for detecting hybrid formation. The PPAR-gamma polypeptide is useful in diagnostics, drug

Sequences AAS44576-AAS44919 represent full-length polynucleotides and contig polynucleotides encoding polypeptides of the invention. The DNA and protein sequences are useful for the treatment, diagnosis and and protein sequences are useful for the treatment, diagnosis and prevention of various types of disorder in a mammalian subject such as a such as leukemia, lymphona and neuroblastoma, autoimmune disorders such as multiple sclerosis, connective tissue disease, rheumatoid arthritis, disorders such as Parkinson's disease, Alzheimer's disease, Huntington's chorea, amyotrophic lateral sclerosis, spinal muscular atrophy and wernicke disease, inflammatory disorders such as nephritis, Crohn's wernicke disease, inflammatory disorders such as nephritis, Crohn's disease. The sequences exhibit activity relating to angiogenesis, cell proliferation, cell differentiation, stem cell growth factor, activin or inhibin. Therefore, they can be used to manipulate stem cells

in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, accidental damage or genetic disorders. The sequences may also be used for regeneration of bone, cartilage, tendons and ligaments and in tissue repair and burn healing.
                                                                        Note: Some sequences for this patent did not form part of the printed specification, but were obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents the nucleotide sequence including and surrounding the fusion juncture in the PAX8e8-PPARgammael DNA.
                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New PAX8-PPARcl oncogene and oncoprotein, useful for detecting and treating certain tumors or cancers, e.g. follicular carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PAX8-PPARgammal; oncogene; cytostatic; PAX8; PPARgammal; cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 contains a PAX8 coding region fueed to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of primer PAG-U, which was used with primer PAG-L (see AAH36112) in the PCR amplification of human peroxisome proliferator-activated receptor gamma (PPAR-gamma) cDNA, using heart cDNA as template. The primers are based on the reported base sequence of the PPAR-gamma gene. PPAR-gamma is a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               novel 5-membered N-heterocyclic compounds having hypoglycaemic and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         hypolipidaemic action, making them useful as agents for preventing or treating diabetes mellitus, hyperlipidaemia, impaired glucose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               expression is induced at a very early stage of adipose cell differentiation. PPAR-gamma forms a dimer with the retinoid X receptor (RAR) by binding to a ligand, and binds to a responsive site of a target gene in the nucleus to directly control (activat transcription. PPAR-gamma ligands suppress the production of inflammatory cytokines by monocytes. The invention provides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          tolerance, inflammatory disease and arteriosclerosis. The no compounds have potent PPAR-gamma-RXR-alpha heterodimer ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 33;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes retinoid associated receptor regulators comprising a 1,3-azole derivative (1). The retinoid associated receptor regulators are useful as insulin receptor binding agents for treating and preventing diabetes, hyperlipsemia and obesity. (1) may also be useful for the treatment and prevention of diabetic complications (e.g. nerve, kidney, retina, blood vessel and bone narrowing disorders and diseases), osteoporosis, cadhexia (e.g. due to cancer, diabetes or vascular disorders) fatty liver hypertension, polycystic ovary yndrome, kidney disorders (e.g. glomerulonephritis, diabetes or syndrome, kidney disorders (e.g. glomerulonephritis, diabetic chaptopathy and glomerulone x, cancer (e.g. leukaemia and breast cancer), and arteriosolerosis. The present sequence represents a PCR primer for infartiosolerosis. The present sequence represents a PCR primer for infartion which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0;

Use of new and known alkoxyiminoalkanoic acid derivatives as peroxisome proliferation-activated receptor agonist like substances for treating e.g. diabetes

Example; Page 66; 92pp; Japanese.

endocrine, cardiant, cerebroprotective, antinfilamentory, antiarthritic, antirheumatic, hepatotropic, respiratory, antiuncer and gastrointestinal activities. (I) can be used for treating or preventing diabetic complications (such as neuropathy, nephropathy, retinopathy or osteopathy), obesity, hypertension, cachexia (e.g. due to cancer, infections or AIDS), polycystic ovary syndrome, renal disorders (e.g. qlomerulonephritis), muscular dystrophy, myocardial infarction, cerebral apoplexy), syndrome X, tumours, inflammatory diseases (e.g. chronic rheumatoid arthritis, hepatitis, pneumonia or ulcerative colitis) and arteriosclerosis. The present sequence represents a PCR primer for human PPAR gamma, which is used in an example from the present invention. alkoxyiminoalkanoic acid derivatives (I). Alkoxyiminoalkanoic acid derivatives and their salts and produces can be used for treating or preventing diabetes, hyperlipemia or impaired glucose tolerance or as a ligand for peroxisome proliferation-activated receptors (PPAR) or retinoid X receptors (RXR). (I) have antidiabetic, neuroprotective, nephrotropic, ophthalmological, osteopathic, antilipemic, hypotensive, muscular, immunosuppressive, cytostatic, antibacterial, anti-HIV, The present invention describes the use of new and known

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1,
